Requirements:

- Total area must equal sum of areas of individual rooms.
- All rooms must be rectangular.
- Utility closet and stairwell must each be at least 100 square feet.
- No length or width can be under 10 feet.
- Length is 44, width is 30.
- Bathroom must be at least 200 square feet.
- Two other rooms, each at least 400 square feet.

Classification and configuration are both hierarchical.

Configuration leverages classification's notion of prototype concepts.

*Configuration suggests
starting with a
prototype concept and
assigning values to
variables.*

Configuration suggests starting with a prototype concept and assigning values to variables.

Case-based reasoning suggests starting from a specific chair and tweaking it as needed.

The result of a planning task can lead to a prototype that can subsequently be configured for similar problems with differing constraints.
